1 hour

Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- A clean copy of the **physics data booklet** is required for this paper.
- The maximum mark for this examination paper is [35 marks].

| Section A | Questions |
|-----------------------|-----------|
| Answer all questions. | 1 – 2 |

| Section B | Questions |
|--|-----------|
| Answer all of the questions from one of the options. | |
| Option A — Relativity | 3 – 4 |
| Option B — Engineering physics | 5 – 6 |
| Option C — Imaging | 7 – 8 |
| Option D — Astrophysics | 9 – 10 |

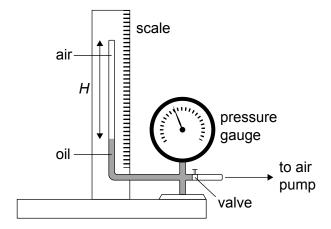

25 pages

Section A

Answer **all** questions. Answers must be written within the answer boxes provided.

1. The equipment shown in the diagram was used by a student to investigate the variation with volume, of the pressure *p* of air, at constant temperature. The air was trapped in a tube of constant cross-sectional area above a column of oil.

The pump forces oil to move up the tube decreasing the volume of the trapped air.

| (a) | The student measured the height <i>H</i> of the air column and the corresponding air |
|-----|--|
| | pressure <i>p</i> . After each reduction in the volume the student waited for some time before |
| | measuring the pressure. Outline why this was necessary. |
| | |
| | |

| | |
|------|------|
| | |
| | |

(This question continues on the following page)

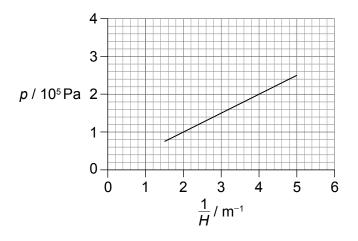

[1]

[3]

(Question 1 continued)

(b) The following graph of p versus $\frac{1}{H}$ was obtained. Error bars were negligibly small.

The equation of the line of best fit is $p = a + \frac{b}{H}$.

Determine the value of *b* including an appropriate unit.

(c) Outline how the results of this experiment are consistent with the ideal gas law at constant temperature. [2]

(This question continues on the following page)

(Question 1 continued)

| (d) | The cross-sectional area of the tube is $1.3 \times 10^{\circ}$ m² and the temperature of air is 300 K. Estimate the number of moles of air in the tube. | [2] |
|-----|--|-----|
| | | |
| | | |
| | | |
| | | |
| (e) | The equation in (b) may be used to predict the pressure of the air at extremely large values of $\frac{1}{H}$. Suggest why this will be an unreliable estimate of the pressure. | |
| | H Suggest with this will be all unreliable estimate of the pressure. | [2] |
| | H Suggest why this will be an unreliable estimate of the pressure. | [2] |
| | Waldes of — . Suggest why this will be all unreliable estimate of the pressure. | [2] |
| | values of $\frac{1}{H}$. Suggest why this will be all unreliable estimate of the pressure. | [2] |
| | values of $\frac{1}{H}$. Suggest why this will be all unreliable estimate of the pressure. | [2 |

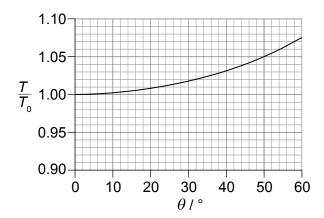

2. (a) In a simple pendulum experiment, a student measures the period T of the pendulum many times and obtains an average value $T = (2.540 \pm 0.005)$ s. The length L of the pendulum is measured to be $L = (1.60 \pm 0.01)$ m.

Calculate, using $g = \frac{4\pi^2 L}{T^2}$, the value of the acceleration of free fall, including its uncertainty. State the value of the uncertainty to one significant figure.

[3]

| | |
|------|------|
| | |

(b) In a different experiment a student investigates the dependence of the period T of a simple pendulum on the amplitude of oscillations θ . The graph shows the variation of $\frac{T}{T_0}$ with θ , where T_0 is the period for small amplitude oscillations.

The period may be considered to be independent of the amplitude θ as long as $\frac{T-T_0}{T_0} < 0.01$. Determine the maximum value of θ for which the period is independent of the amplitude.

Turn over

Section B

Answer **all** of the questions from **one** of the options. Answers must be written within the answer boxes provided.

Option A — Relativity

3. A long current-carrying wire is at rest in the reference frame S of the laboratory. A positively charged particle P outside the wire moves with velocity v relative to S. The electrons making up the current in the wire move with the same velocity v relative to S.

current-carrying wire

| (a) | State what is meant by a reference frame. | [1] |
|---------|--|-----|
| | | |
| • • • • | | |
| (b) | State and explain whether the force experienced by P is magnetic, electric or both | |
| | | |
| | (i) in reference frame S. | [2] |
| | (i) in reference frame S. | [2] |
| | (i) in reference frame S. | [2] |
| | (i) in reference frame S. | [2] |

(Option A continues on the following page)

(Option A, question 3 continued)

| | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|------|--------|----|----|---|--------|---|------|------|---|----|---|------|------|----|---|-------|----|---|----|------|----|---|----|---|----|---|----|----|---|------|--|--|
| | ٠. | ٠. | | | ٠. | - | | | • | | | | | | | | | - | | | | • | | • | | ٠ | | ٠. | | | | |
| | ٠. | ٠. | ٠. | | ٠. | | | | | | | | | ٠. | - | - | ٠. | | ٠. | | ٠. | • | | • | | • | | ٠. | • | | | |

| | ٠. | ٠. | | • | | - | | | • | ٠. | • | | | ٠. | | | | - | | ٠. | ٠. | • | ٠. | • | ٠. | | ٠. | | • | | | |
| | ٠. | ٠. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(Option A continues on page 11)

Turn over

(Option A continued)

4. An observer P sitting in a train moving at a speed v measures that his journey takes a time $\Delta t_{\rm P}$. An observer Q at rest with respect to the ground measures that the journey takes a time $\Delta t_{\rm Q}$.

(a) State which of the two time intervals is a proper time. [1]

.....

(b) Calculate the speed v of the train for the ratio $\frac{\Delta t_P}{\Delta t_Q} = 0.30$. [2]

(c) Later the train is travelling at a speed of 0.60c. Observer P measures the length of the train to be 125 m. The train enters a tunnel of length 100 m according to observer Q.

Show that the length of the train according to observer Q is 100 m. [2]

(Option A continues on the following page)

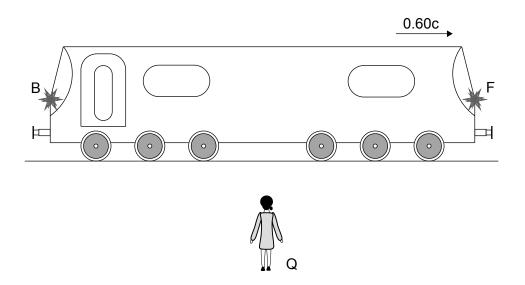

Turn over

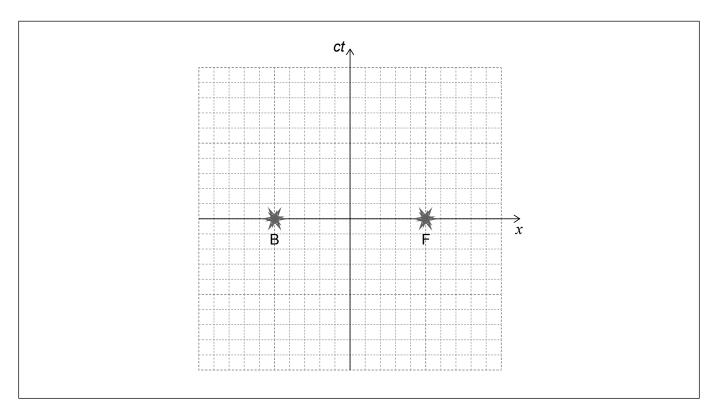

[1]

(Option A, question 4 continued)

(d) According to Q there is an instant at which the train is completely within the tunnel. At that instant two lights at the front and the back of the train are turned on simultaneously according to Q.

The spacetime diagram according to observer Q shows event B (back light turns on) and event F (front light turns on).

(i) Draw the time ct' and space x' axes for observer P's reference frame on the spacetime diagram.

(Option A continues on the following page)

(Option A, question 4 continued)

| (ii) | Deduce, using the spacetime diagram, which light was turned on first according to observer P. | [3] |
|-------|---|-----|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| (iii) | Apply a Lorentz transformation to show that the time difference between events B and F according to observer P is 2.5×10^{-7} s. | [1] |
| | | |
| (iv) | Demonstrate that the spacetime interval between events B and F is invariant. | [2] |
| | | |
| | | |
| | | |
| | | |
| | | |

(Option A continues on page 15)

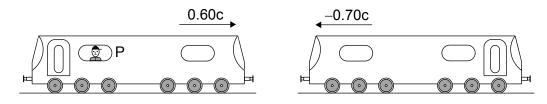

Turn over

(Option A, question 4 continued)

(e) A second train is moving at a velocity of -0.70c with respect to the ground.

| Calculate the speed of the second train relative to observer P. | [2] |
|---|-----|
| | |
| | |
| | |
| | |
| | |
| | |

End of Option A

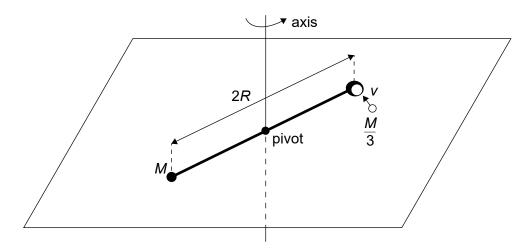

[1]

Option B — Engineering physics

5. A horizontal rigid bar of length 2R is pivoted at its centre. The bar is free to rotate in a horizontal plane about a vertical axis through the pivot. A point particle of mass M is attached to one end of the bar and a container is attached to the other end of the bar.

A point particle of mass $\frac{M}{3}$ moving with speed v at right angles to the rod collides with the container and gets stuck in the container. The system then starts to rotate about the vertical axis.

The mass of the rod and the container can be neglected.

| (a) | (i) | Write down an expression, in terms of M , v and R , for the angular momentum of the system about the vertical axis just before the collision. | [1] |
|-----|-----|---|-----|
| | | | |
| | | | |

| (ii) | Just after the collision the system begins to rotate about the vertical axis with |
|------|---|
| | angular velocity ω . Show that the angular momentum of the system is equal |
| | to $\frac{4}{3}MR^2\omega$. |

| | |
|------|------|
| | |

(Option B continues on the following page)

(Option B, question 5 continued)

| (111) | Herice, show that $\omega = \frac{1}{4R}$. | נין |
|-------|---|-----|
| | | |
| | | |
| (iv) | Determine in terms of M and v the energy lost during the collision. | [3] |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

(b) A torque of 0.010 N m brings the system to rest after a number of revolutions. For this case R = 0.50 m, M = 0.70 kg and v = 2.1 m s⁻¹.

| • • | | • | • | • • | | • | | • | | • | • | • | | • | | • | • | | • | • | | • | • | | | • | • • | • | • | | • | | • | | • | | • | | • | • | • | • | • | • | | |
| | | | • | | ٠. | • | | • | | • | | • | | • | | • | • | | • | • | | • | • | | | • | • • | • | • | | • | | • | | • | | • | | • | • | • | • | | ٠. | | |

(ii) Calculate the number of revolutions made by the system before it comes to rest. [3]

| | |
|------|--|
| | |

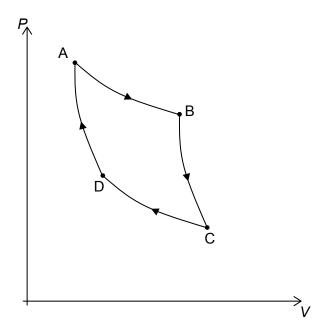

(Option B continues on the following page)

Turn over

(Option B continued)

6. The P-V diagram of the Carnot cycle for a monatomic ideal gas is shown.

| (a) | State what is meant by an adiabatic process. | [1] |
|-----|--|-----|
| | | |
| (b) | Identify the two isothermal processes. | [1] |
| | | |

(c) The system consists of 0.150 mol of a gas initially at A. The pressure at A is $512\,k$ Pa and the volume is $1.20\times10^{-3}\,m^3$.

| (i) | Determine the temperature of the gas at A. | [2] |
|-----|--|-----|
| (י) | Determine the temperature of the gas at A. | [4] |

| | |
|------|------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

(Option B continues on the following page)

(Option B, question 6 continued)

| | (ii) | The volume at B is $2.30 \times 10^{-3} \text{m}^3$. Determine the pressure at B. | [2] |
|-------|------|--|-----|
| | | | |
| • • • | | | |
| (d) | At C | C the volume is $V_{ m c}$ and the temperature is ${\cal T}_{ m c}$. | |
| | (i) | Show that $P_{\rm B}V_{\rm B}^{\frac{5}{3}} = nRT_{\rm C}V_{\rm C}^{\frac{2}{3}}$. | [1] |
| | | | |
| | | | |
| | (ii) | The volume at C is $2.90 \times 10^{-3} \text{m}^3$. Calculate the temperature at C. | [2] |
| | | | |
| • • • | | | |
| (-) | 01-4 | | |
| (e) | Stat | e a reason why a Carnot cycle is of little use for a practical heat engine. | [1] |
| | | | |

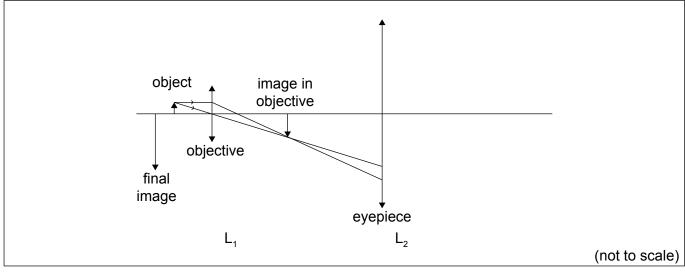

End of Option B

Turn over

Option C — Imaging

7. (a) The diagram is a partially-completed ray diagram for a compound microscope that consists of two thin converging lenses. The objective lens L_1 has a focal length of 3.0 cm. The object is placed 4.0 cm to the left of L_1 . The final virtual image is formed at the near point of the observer, a distance of 24 cm from the eyepiece lens L_2 .

| (i) | State what is meant by a virtual image. | [1] |
|-------|--|-----|
| | | |
| (ii) | Show that the image of the object formed by L_1 is 12 cm to the right of L_1 . | [1] |
| | | |
| | | |
| (iii) | The distance between the lenses is $18\mathrm{cm}$. Determine the focal length of L_2 . | [3] |

| | | | | | | | | | | | | • | | | | | | | | | | • | | | | | | | | | | | | | | | |
